

Bridges are everywhere; over roads, over rivers and canals, spanning estuaries and joining islands to the mainland.

Sometimes bridges have to span great distances.

The **Humber Bridge** held the world record, 1410m, for the longest single span suspension bridge for 17 years until 1998.

Build the **longest** bridge you can from a **single** sheet of A4 paper.

It has to support a block of **8 cubes** at its centre.

You may use **scissors** but no glue, sticky tape or other materials.
